From Technological Diversity for Growth to Technodiversity in Post-Growth

Pauline Picot

PhD student

Technological diversity is a prerequisite for ecological transition

Technological diversity is a prerequisite for ecological transition

BUT

Technological diversity accompanies growth

Technological diversity is a prerequisite for ecological transition

BUT

Technological diversity accompanies growth

Hyp: Ecological transition requires a shift of technology toward post growth

Which technological diversity could be valued to move toward post-growth?

Which technological diversity could be valued to move toward post-growth?

- 1. What is meant by « technological diversity »?
- 2. Projecting by analogy: from optimization to suboptimality
- 3. A proposal: Technodiversity

1. What is meant by « technological diversity »?

A literature review

- How is understood « technological diversity »?
- For what is it (or not) promoted?
- Hyp: A system of values can be visible in scientific papers

Are these understandings of « technological diversity » embedded into a growth system of values?

1. What is meant by « technological diversity »?

Requests (limited to publications after 2015)	Number of results
TITLE (technological AND diversity AND ict)	0
TITLE (technological AND diversification AND ict)	2
TITLE-ABS-KEY ("technological diversity" AND ict)	1
TITLE-ABS-KEY ("technological diversification" AND ict)	2
TITLE (technological AND diversity) AND (LIMIT-TO (SUBJAREA, "COMP" OR "ENGI"))	12

Number of total relevant results: 13 articles

1. What is meant by « technological diversity »?

Te	chnological diversity as	For
1.	Diversity of patents of a firm	Innovation
2.	A property of a network	Innovation, Resilience, Technological Convergence
3.	A component of technological evolution	Growth, Competitiveness

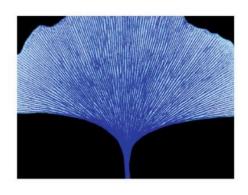

- One key driver of the Anthropocene is our « conception of optimization »
- Optimization
 - Improvement of performance
 - Effectiveness + Efficiency
 - Has intrinsic value

- Suboptimality
 - Projection from thepresent situation: optimization

OLIVIER HAMANT

LA TROISIÈME VOIE DU VIVANT

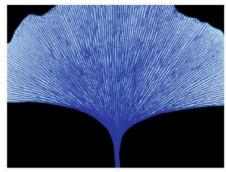

Suboptimality

- Projection from thepresent situation: optimization
- « the capacity of evolving on the long term while using internal weaknesses, not as problems to be circumvented, but as springboard for adaptability »

Suboptimality

- Randomness
- Redundancy
- Waste
- Heterogeneity
- Fluctuations
- Slowness & hesitation
- Incoherences
- Errors & Imprecisions
- Incompletion & Imperfection

 Randomness: diversity a priori before selection allows for adaptation

- Randomness: diversity a priori before selection allows for adaptation
- Heterogeneity allows for information transfer and coordination

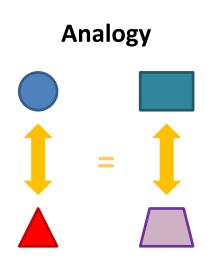

- Randomness: diversity a priori before selection allows for adaptation
- Heterogeneity allows for information transfer and coordination

- Fluctuations do not hinder reproducibility
 - -> law of large numbers

Analogy: identity of relations

Analogy: identity of relations

Biodiversity

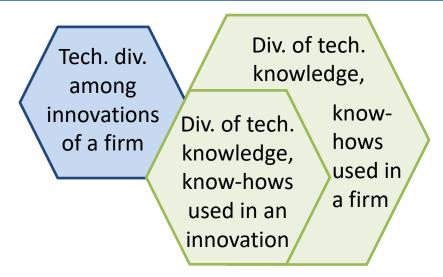

- The diversity of diversities
- Multiple facets in relation
 with one another
- Can never be studied entirely

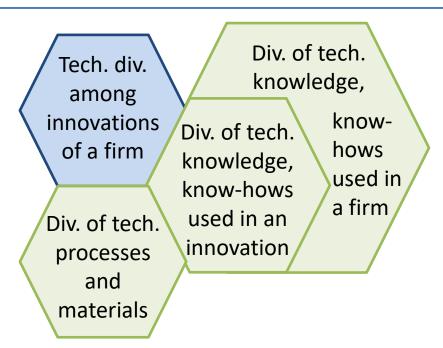

- Analogy: identity of relations
- Biodiversity
 - The diversity of diversities
 - Multiple facets in relation with one another
 - Can never be studied entirely

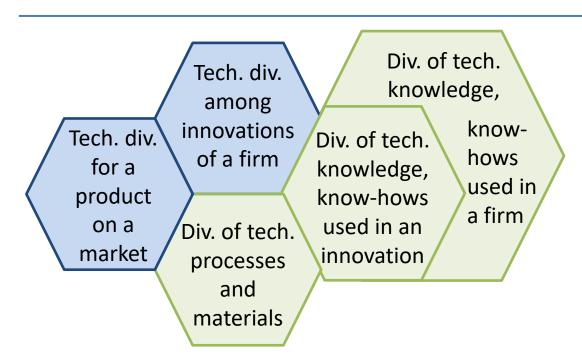

What relations do exist between the diverse technological diversities?

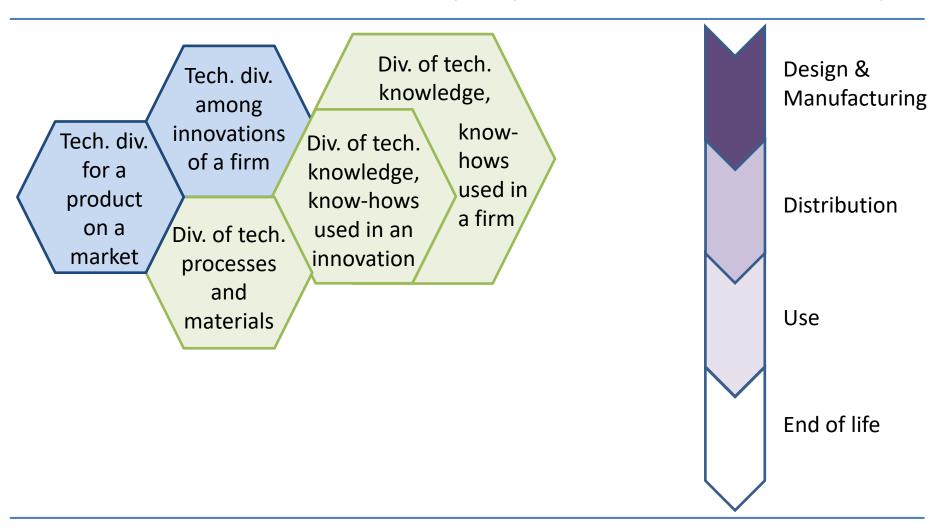

What other facets of technological diversity are being masked?

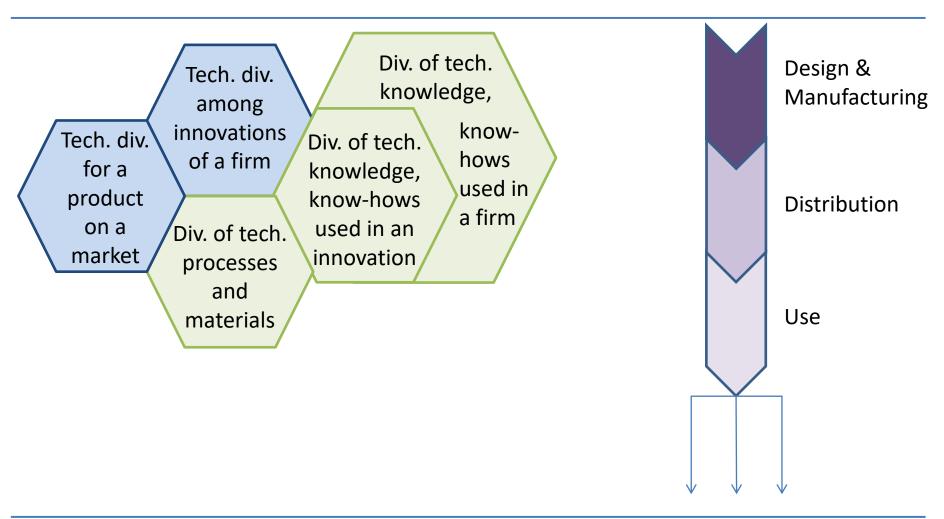

Tech. div.
among
innovations
of a firm

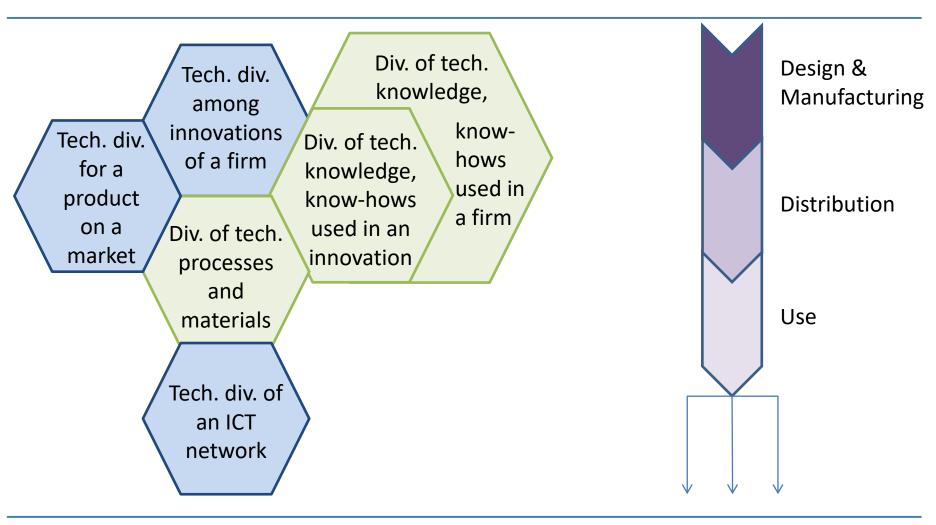

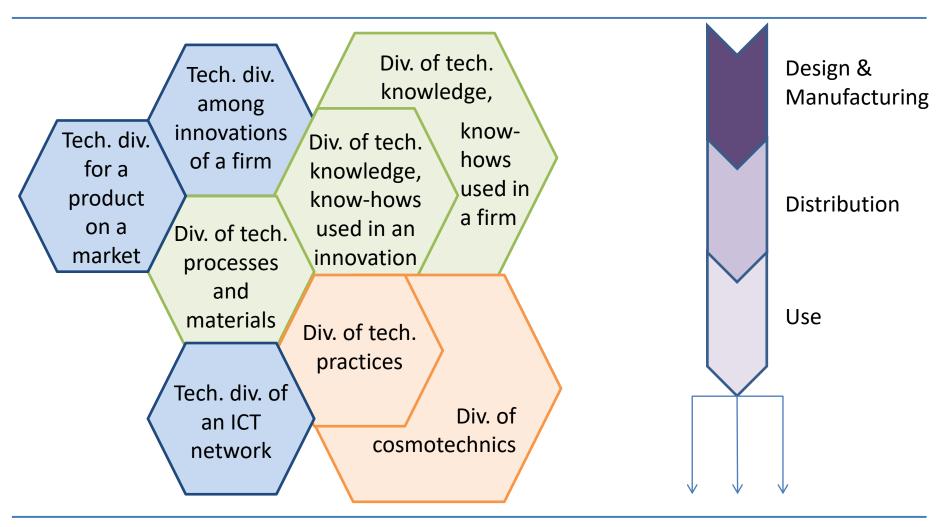

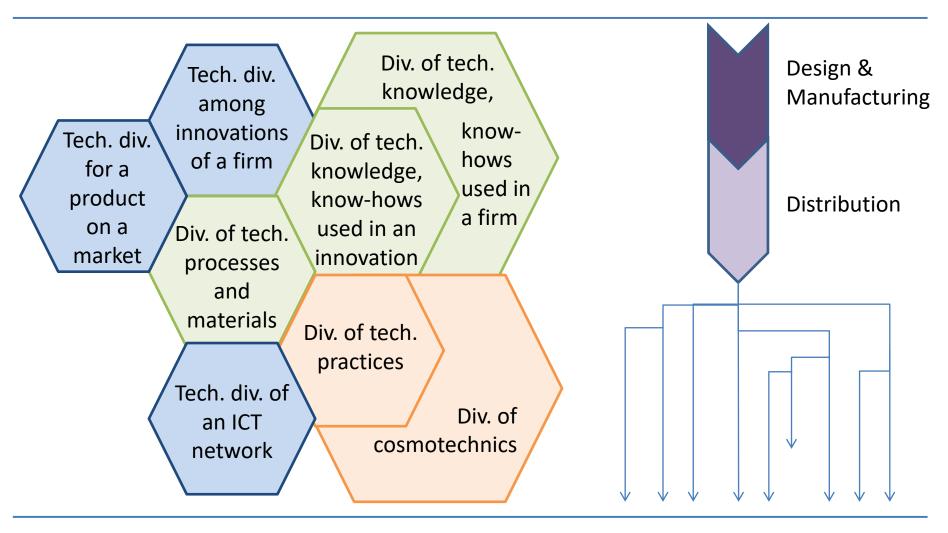

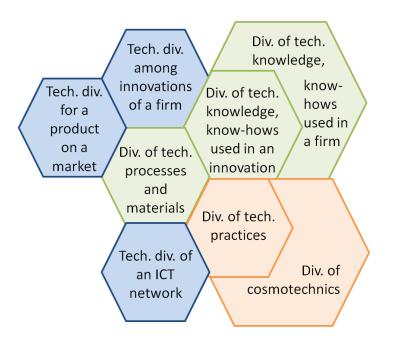

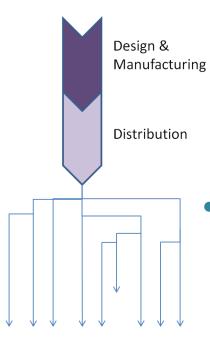

Conclusion

Which technological diversity could be valued to move toward post-growth?

- Technodiversity
 - Multiple facets in relation with one another
 - Always a partial view
- Valuing of
 - Relations
 - Openness
 - Indetermination
